

# Driver Fatigue Monitoring System

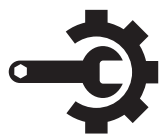

Meitrack independently develops a driver fatigue monitoring system to help prevent accidents caused by the driver getting drowsy. Using unique facial identification technology to analyze the fatigue condition and provide accurate early warning for real fatigue. More importantly, managers can get intuitive driver fatigue reports from Meitrack MS03 tracking platform. This is an effective way to determine if the driver is drowsy, and thus make sure of safety.

Suit for all vehicles working anytime, anywhere

Audible, visible and configurable alerts

Easy to install & use

Monitor via web page or app
